

Abel Sabu

[LinkedIn](#) | [GitHub](#) | [Portfolio](#)

Summary

Computer Science student specializing in **AI/ML** and **Cybersecurity** with hands-on experience in **OOP**, **SQL**, **machine learning**, **LLM/agent workflows**, and **cloud computing**. Skilled in **full-stack development**, microservices architecture along with IT infrastructure management. Proven track record of delivering scalable **MLOps** solutions, data pipelines, and AI-driven products through agile development in enterprise and startup environments.

Education

York University [GPA 3.3]

Bachelor of Science in Computer Science, Specialization in Computer Security and AI

Toronto, ON

Sep. 2021 – Apr. 2027

Experience

Cloud Engineering Intern

Vosyn

Toronto, ON

September 2026 – April 2027

- Improved cloud infrastructure reliability, scalability, and deployment efficiency by provisioning and managing GCP resources with Terraform and Kubernetes, automating operational workflows with Python, and supporting monitoring, security, and cost optimization across cloud environments.

AI Trainer

Outlier AI

San Francisco, CA

May 2026 – September 2026

- Built agentic automation workflows using n8n and Excel to streamline multi-step business processes for companies, supported by SQL-based data cleaning and validation to improve workflow reliability and data quality.

AI Engineering Fellow

OpenClaw Summer Fellowship

San Francisco, CA

June 2026 – Aug. 2026

- Built Triage, an AI crypto-tax forensic agent that produced CPA-reviewable cost-basis reconciliations by analyzing multi-wallet transactions across DeFi and cross-chain bridges and integrating GOAT Network, ERC-8004, and x402

Information Technology Assistant

York University

Toronto, ON

May 2024 – September 2024

- Improved IT deployment efficiency and support operations by managing SCCM-based device imaging, developing configuration management policies, and supporting secure cloud migration and endpoint deployment.

Client Service Representative – Team Lead

York University

Toronto, ON

Sep. 2023 – Apr 2026

- Strengthened team performance and service consistency by training and coaching 40+ staff using the RATER customer-service model, standardizing service expectations and improving frontline decision-making.

Projects

Precogni – AI Driver Drowsiness Detector | *Python, Gemini API, Node.js, OpenCV, Whisper AI*

Hack the 6ix

- Built a proactive fatigue-detection system in a 3-day hackathon, integrating **Gemini AI** into a **computer-vision pipeline** to detect eye closure, yawning, and head tilt, coordinating CV and AI integration across a 4-person team.

SaveBetter – Adaptive Financial Planning App | *Next.js, React 18, TypeScript, Tailwind*

AWS Hackathon

- Built an adaptive savings engine with **AI-enhanced behavioral analysis** by integrating **GPT-4** for personalized recommendations, integrating real-time Canadian banking data (RBC, TD, BMO, Scotiabank, EQ Bank, Tangerine etc.)

RetailAI | *Azure ML, Custom Vision, Azure OpenAI, Node.js, Kubernetes*

Microsoft Hackathon

- Built a retail AI platform with **Azure ML**, **Custom Vision**, and a **RAG-powered chatbot**; architected an **MLOps** framework with Azure DevOps, MLflow, and IaC for automated deployments on **AKS**.

Technical Skills & Awards

Languages: Java, Python, C/C++, SQL (PostgreSQL), JavaScript, TypeScript, HTML/CSS, R, Shell Scripting

Frameworks: React, Node.js, Next.js, Flask, FastAPI, JUnit, Material-UI, WordPress

Cloud & DevOps: Azure (ML, OpenAI, DevOps, AKS), AWS, GCP, Docker, Kubernetes, CI/CD, TravisCI, MLflow, MLOps

AI/ML & Tools: pandas, NumPy, Matplotlib, LLM/Agentic Workflows, RAG, Git, VS Code, Power BI

Hackathons Attended & Won: Hack The North, Hack The Valley, Hack the 6ix, AWS Hackathon, Microsoft OpenHack, Cursor Hackathon, OpenAI Hackathon and OpenClaw Hackathon, NASA HACKS
